

Problem at hand

- How to create and develop user-friendly interfaces according to recent research about children's perceptions and needs when interacting with the public libraries digital interfaces.

Challenges in addressing the problem

- Develop user studies and analyze the result
- Technical development according to the result

Vision

- Short-term: a library web site that's customized to children and their needs
- Long-term: increased usages of digital services at the public libraries.

Concrete contribution

- Arrange target groups of children
- Some knowledge about web programming
